

# NuLink Digital's IP Network Congestion Management Policy

NuLink is committed to providing each of our customers with the best Internet experience possible. To this end, NuLink employs minimally invasive network congestion management processes that are consistent with industry practices, insure fair and equitable network resources sharing, minimize network congestion and maximize user enjoyment.

**Because NuLink values each customer and recognizes that everyone's usage of the Internet may differ, NuLink does not impose usage limits, usage caps, or penalties for usage that exceeds a threshold.**

NuLink uses two processes to accomplish its congestion management goals; traffic prioritization and, to a limited degree, protocol specific equitable bandwidth constriction.

NuLink's traffic prioritization works by placing a high priority on time sensitive traffic such as messaging and collaboration, telephone and most on-line gaming traffic. This prioritization is provider neutral, so our customers will experience the same low network latency for these protocols and services whether the traffic originates with NuLink, or any one of the multitude of sources or providers that use the Internet as their transport medium. The use of such prioritization ensures that these time sensitive services perform without issue on NuLink's network. Below is a comprehensive list of specific protocols that are assigned high priority on NuLink's network:

Collaboration Suites	IMAP4-TLS
First Class	MAPI over DCE RPC
GroupWise	Netwise Calendar
Lotus Notes	POP3
SubEthaEdit	POP3-TLS
Community	SMTP
BitCoin	SMTP-TLS
Facebook iPhone	Evernote iPhone
Glynx	Geographical
Habbo Hotel	Nearby iPhone
Lunarstorm live	Group Chat
Nntp	Ares chat
Palace chat	chat at chat.zone.com
SmartFox	chatango
SmugShot iPhone	IMVU
Dictionary Server Protocol	IRC
Distributed Computing	SILC
BOINC	Voodoo chat
distributed.net client	Hanwha Eagle Office
Plura Processing control	Instant Messaging
E-mail and Callendaring	51GuaGua
IMAP4	Ali WangWang

NuLink's protocol specific equitable bandwidth constriction works by setting a margin for each video stream established between a user's modem and a legitimate commercial IP streaming video provider to the lesser of the capacity provided by the subscriber's service package, or 2.5 Mbps. This margin is placed on each stream on all modems associated with each residential Internet subscription in an effort to insure that no one stream inequitably dominates NuLink's network resources, and all modems have fair and equal access to those resources. Because a high amount of bandwidth is allocated to each stream's margin, little or no effect should be experienced by NuLink customers. Below is a list of protocols that may be subject to NuLink's protocol specific equitable bandwidth constriction:

Abacast  
Babelgum
